PROFILE

Full-stack software engineer and founder of Psyberly Labs, specializing in scalable web systems, real-time dashboards, and offline-first progressive web apps. Comfortable across the stack, from React and Next.js front ends to Node.js and Supabase backends, with a focus on shipping reliable, production-ready products quickly.

EXPERIENCE

Founder & Lead Product Engineer — 2024 – PRESENT

Psyberly Labs

- Architected and shipped SaaS dashboards and progressive web apps for clients across multiple industries
- Led product and engineering decisions end to end, from concept through deployment
- Built reusable infrastructure and tooling to speed up MVP delivery for new products

Software Engineer — EARLIER

Freelance / Contract Work

- Delivered full-stack web applications for early-stage startups
- Collaborated directly with founders on product scope and technical architecture

PROJECTS

NexFlow Dashboard — school-portal-phi-silk.vercel.app

Real-time analytics SaaS with offline-first architecture, built for schools managing complex operational data.

Next.js, Supabase

Lens App — lensapp.vercel.app

AI-powered knowledge base with vector search for fast, contextual retrieval.

React, OpenAI

Eden Alpha Marketing — edenalphamarketing.com

Offline-capable field operations app with background sync for distributed teams.

PWA, Node.js
